 certain principles guide the database  
 design process the first principle is that  
 duplicate information also called  
 redundant data is bad because it

 the second principle is that the

web database design is the  
 organization of data according to a  
 database model the designer  
 determines what data must be stored  
 and how the data elements interrelate  
 with this information they can begin to  
 fit the data to the database model a  
 database management system manages  
 the data accordingly
