**The Star-Crossed Stone** Ken McNamara, 2010-11-15 Throughout the four hundred thousand years that humanity has been collecting fossils, sea urchin fossils, or echinoids, have continually been among the most prized, from the Paleolithic era, when they decorated flint axes, to today, when paleobiologists study them for clues to the earth's history. In *The Star-Crossed Stone*, Kenneth J. McNamara, an expert on fossil echinoids, takes readers on an incredible fossil hunt, with stops in history, paleontology, folklore, mythology, art, religion, and much more. Beginning with prehistoric times, when urchin fossils were used as jewelry, McNamara reveals how the fossil crept into the religious and cultural lives of societies around the world—the roots of the familiar five-pointed star, for example, can be traced to the pattern found on urchins. But McNamara's vision is even broader than that: using our knowledge of early habits of fossil collecting, he explores the evolution of the human mind itself, drawing striking conclusions about humanity's earliest appreciation of beauty and the first stirrings of artistic expression. Along the way, the fossil becomes a nexus through which we meet brilliant eccentrics and visionary archaeologists and develop new insights into topics as seemingly disparate as hieroglyphics, Beowulf, and even church organs. An idiosyncratic celebration of science, nature, and human ingenuity, *The Star-Crossed Stone* is as charming and unforgettable as the fossil at its heart.

**Red Prometheus** Dolores L. Augustine, 2007 This analysis of the relationship between science and totalitarian rule in one of the most technically advanced countries in the East bloc examines professional autonomy under dictatorship and the place of technology in Communist ideology. In Cold War-era East Germany, the German tradition of science-based technology merged with a socialist system that made technological progress central to its ideology. Technology became an important part of East German socialist identity--crucial to how Communists saw their system and how citizens saw their state. In *Red Prometheus*, Dolores Augustine examines the relationship between a dictatorial system and the scientific and engineering communities in East Germany from the end of the Second World War through the 1980s. Drawing on newly opened archives and extensive interviews, Augustine looks in detail at individual scientists' interactions with the East German system, examining the effectiveness of their resistance against the party's totalitarian impulses. She explains why many German scientists and engineers who were deported to the Soviet Union after World War II returned to East Germany rather than defecting to the capitalist West, traces scientists' attempts to hold on to some aspects of professional autonomy, and describes challenges to their professional identity on the factory floor. Augustine examines the quality of science and technology produced under Communist rule, looking at failed research projects and clashing cultures of innovation. She looks at technological myth-building in science fiction and propaganda. She explores individual career strategies, including the role played by gender in high-tech professions, and the ways that both enterprises and individuals responded to increasing state and party control of research during the 1980s. We cannot understand the economic choices made by East Germany, Augustine argues, unless we understand the cultural values reflected in the East German belief in technology as indispensable to progress and industrial development.

The Future Is Rural Jason Bradford,2019-02-19 The Future is Rural challenges the conventional wisdom about the future of food in our modern, globalized world. It is a much-needed reality check that explains why certain trends we take for granted-like the decline of rural areas and the dependence of farming and the food system on fossil fuels-are historical anomalies that will reverse over the coming decades. Renewable sources of energy must replace fossil fuels, but they will not power economies at the same scale as today. Priorities will profoundly shift, and food will become a central concern. Lessons learned from resilience science and alternatives to industrial agriculture provide a foundation for people to transition to more rural and locally focused lives.Jason Bradford, a biologist and farmer, offers a deeply researched report on the future of food that reveals key blind spots in conventional wisdom on energy, technology, and demographics. The Future Is Rural presents Bradford's analysis from his career in ecology and agriculture, as well as a synthesis of the historical and scientific underpinnings of the astonishing changes that will transform the food system and society as a whole.

The Deer Park Norman Mailer,1997 Desert D'Or is the fashionable Californian resort where Hollywood's elite converge when they need a break. It is an incestuous hothouse of a town - a haven for manipulators, film stars, lovers, pimps,

producers, whores, gamblers, scriptwriters and cheats. Into this nightmare world of depravity arrives Sergius O'Shaughnessy, recently discharged from the Air Force, traumatised by his ar experiences and trying to write the Great American Novel. But O'Shaughnessy's burning ambition begins to lose its edge; lured by greed and rules by weakness, he soon becomes disturbingly familiar with the dnagerous life of slick compromises and sexual follies... The Deer Park is a powerful and vigorous satire on Hollywood's excesses and corruption. Combining a savage imagination with a heightened documentary realism, Mailer paints an uncompromising and terrifying portriat of a decadent society lost in moral confusion and despair.

**Every Tool's a Hammer** Adam Savage, 2020-10-27 In this New York Times bestselling “imperative how-to for creativity” (Nick Offerman), Adam Savage—star of Discovery Channel’s Mythbusters—shares his golden rules of creativity, from finding inspiration to following through and successfully making your idea a reality. Every Tool’s a Hammer is a chronicle of my life as a maker. It’s an exploration of making, but it’s also a permission slip of sorts from me to you. Permission to grab hold of the things you’re interested in, that fascinate you, and to dive deeper into them to see where they lead you. Through stories from forty-plus years of making and molding, building and breaking, along with the lessons I learned along the way, this book is meant to be a toolbox of problem solving, complete with a shop’s worth of notes on the tools, techniques, and materials that I use most often. Things like: In Every Tool There Is a Hammer—don’t wait until everything is perfect to begin a project, and if you don’t have the exact right tool for a task, just use whatever’s handy; Increase Your Loose Tolerance—making is messy and filled with screwups, but that’s okay, as creativity is a path with twists and turns and not a straight line to be found; Use More Cooling Fluid—it prolongs the life of blades and bits, and it prevents tool failure, but beyond that it’s a reminder to slow down and reduce the friction in your work and relationships; Screw Before You Glue—mechanical fasteners allow you to change and modify a project while glue is forever but sometimes you just need the right glue, so I dig into which ones will do the job with the least harm and best effects. This toolbox also includes lessons from many other incredible makers and creators, including: Jamie Hyneman, Nick Offerman, Pixar director Andrew Stanton, Oscar-winner Guillermo del

Toro, artist Tom Sachs, and chef Traci Des Jardins. And if everything goes well, we will hopefully save you a few mistakes (and maybe fingers) as well as help you turn your curiosities into creations. I hope this book serves as “creative rocket fuel” (Ed Helms) to build, make, invent, explore, and—most of all—enjoy the thrills of being a creator.
