Black Diamond 2 Brittani Williams, 2011-10-01 Some call her nice, but most call her nasty . . . Diamond, the sassy vixen that you love to hate, is back, and she has a few more tricks up her sleeve. After Kemp's death, she quickly moves on and shacks up with his best friend, Black. Unfortunately, things aren't running as smoothly as they expected. Diamond is quickly losing control of the situation—and her emotions—after multiple attempts on her life by one of the victims she believed she'd killed. To make matters worse, people from her past keep popping up and causing a ruckus, including the father that walked out on her ten years earlier. When a fast-talking corner hustler named Money swoops in and becomes Black's partner, his soldiers become jealous. Black gets locked behind bars, and Money sets his plan in motion, seducing Diamond in an attempt to take Black's place. With all of the drama surrounding her, the I Rule the World disposition that got her where she is slowly breaks into a million pieces. In Nicety, you'll watch her struggle and make mistakes that could cause her to lose the two things she loves the most: Black and money.

Polishing of Diamond Materials Yiqing Chen, Liangchi Zhang, 2013-02-13 Diamond has a unique combination of properties, such as the highest hardness and thermal conductivity among any known material, high electrical resistivity, a large optical band gap and a high transmission, good resistance to chemical erosion, low adhesion and friction, and extremely low thermal expansion coefficient. As such, diamond has been a desirable material in a wide range of applications in mechanical, chemical, optical, thermal and electrical engineering. In many of the cases, the surface of a diamond component or element must have a superior finish, often down to a surface roughness of nanometers. Nevertheless, due to its extreme hardness and chemical inertness, the polishing of diamond and its composites has been a sophisticated process. Polishing of Diamond Materials will provide a state-of-the-art analysis, both theoretically and experimentally, of the most commonly used polishing techniques for mono/poly-crystalline diamond and chemical vapour deposition (CVD) diamond films,

including mechanical, chemo-mechanical, thermo-chemical, high energy beam, dynamic friction and other polishing techniques. The in-depth discussions will be on the polishing mechanisms, possible modelling, material removal rate and the quality control of these techniques. A comparison of their advantages and drawbacks will be carried out to provide the reader with a useful guideline for the selection and implementation of these polishing techniques. Polishing of Diamond Materials will be of interest to researchers and engineers in hard materials and precision manufacturing, industry diamond suppliers, diamond jewellery suppliers and postgraduate students in the area of precision manufacturing.

The wicked treachery and the many twists and turns that unfold as THE DRUG KING AND HIS DIAMOND lives play out will take readers on a roller coaster ride of suspense and emotions in this winner takes all battle to the top.

Diamond in the Dirt 2 Carde'l, 2018-04-07 After paying his dues to the OG who introduced him to the game, and letting everyone know he was not the one to be played with, Real received the golden key to the city and walked through a new door of priceless benefits and unthinkable challenges. Throughout the course of time a huge piece of his heart is shattered in to pieces when he is faced with making one of the hardest decisions of his life. Burdened with guilt and trapped by tragedy, Real tries his best to pull through.

SiC, Natural and Synthetic Diamond and Related Materials A.A. Gippius, R. Helbig, J.P.F. Sellschop, 1992-04-24 This volume addresses the burgeoning field of wide band gap materials. The 64 contributed and invited papers will do much to stimulate the well-justified ongoing work, both theoretical and experimental, in this area. The high standard of the papers attests to the significant progress that has been made in this field, as well as reporting on the challenging problems that still remain to be solved.

Diamond: Genesis, Mineralogy and Geochemistry Karen Smit, Steve Shirey, Graham Pearson, Thomas Stachel, Fabrizio Nestola, Thomas Moses, 2023-05-03 Diamond is the record-setter in many mineralogical properties such as hardness, diffusivity, thermal conductivity, purity, and covalency of bonding. Similarly, diamond, as the premier gemstone of the mantle holds primacy for geological features such as age and depth of origin. Diamond was among the first crystalline structures to be solved by X-ray diffraction and the first materials measured for their Raman spectrum. At more than 80 billion USD in yearly commercial value, diamond sets the record for the most traded, valuable mineral on the planet. Despite its chemical simplicity, diamond has been the object of more research effort, and had more scientific and popular press pages written about it, than any other mineral.

Synthesis, Properties and Applications of Ultrananocrystalline Diamond Dieter M. Gruen, Olga A. Shenderova, Alexander Ya. Vul', 2006-03-30 We are pleased to present the Proceedings of the NATO Advanced Research Workshop "Syntheses, Properties and Applications of Ultrananocrystalline Diamond" which was held June 7-10, 2004 in St. Petersburg, Russia. The main goal of the Workshop was to provide a forum for the intensive exchange of opinions between scientists from Russia and NATO countries in order to give additional impetus to the development of the science and applications of a new carbon nanostructure, called ultrananocrystalline diamond (UNCD) composed of 2-5 nm crystallites. There are two forms of UNCD, dispersed particles and films. The two communities of researchers working on these two forms of UNCD have hitherto lacked a common forum in which to explore areas of scientific and technological overlap. As a consequence, the two fields have up to now developed independently of each other. The time had clearly come to remedy this situation in order to be able to take full advantage of the enormous potential for societal benefits to be derived from exploiting the synergistic relationships between UNCD dispersed particulates and UNCD films. The NATO sponsored ARW therefore occurred in a very timely manner and was successful in beginning the desired dialogue, a precondition for making progress toward the above stated goal. The discovery of UNCD completes a triad of nanostructured carbons which includes fullerenes and nanotubes.
