Indoeuropean Classification: A Lexicostatistical Experiment Isidore Dyen,Joseph B. Kruskal,Paul Black,2007-12 The lexicostatistical method is frequently used to gain information about family trees of languages which are not accessible in study by more traditional methods. The first & major purpose of this work is to validate the lexicostatistical method by presenting the classification it yields for the Indoeuropean family, & comparing that classification with the traditional one. If the classification it yields had differed greatly from the generally accepted one, some would have found that reason enough to challenge the method. The differences, however, appear to be relatively small & subject to reasonable explanations.

Consequently this classification can be regarded as a principal confirmation of the validity of the lexicostatistical method. Illustrations.

Economic Opening Up and Growth in Russia Evgeny Gavrilentov,Paul J.J. Welfens,Ralf Wiegert,2004-01-21 After a decade of sharp economic decline, Russia switched to an impressive period of economic growth. Yet the economic record is still mixed, and many key problems remain unresolved, both in the economic sphere and the political system. The focus is on economic dynamics in Russia, reasons for its hesitant opening up process as well as the special role of the natural resources sector which is expected to continue to grow. This analysis highlights the existing deficiencies of the Russian economic system and raises doubts about the sustainability of growth. Twin focus is on required reforms and endogenous forces that impair liberalizing trade and investment in an orderly way. Russian discussions on WTO and other international topics are reflected.
