Extreme Value Analysis of Wind Gusts in Alberta Thomas K. Flesch,John D. Wilson (Geographer),Canada. Forestry Canada,Alberta Land and Forest Services,Canada-Alberta Partnership Agreement in Forestry,1993 A recent demonstration indicated the benefits and practical applications of a silviculture and harvesting system that protects understory white spruce while harvesting overstory aspen. One of the risks associated with this system is the instability and vulnerability of released white spruce to wind damage. To reduce the risks of wind damage in the current and new silvicultural systems applied to the Boreal forest, wind risk assessment and classification systems must be developed. This report presents an analysis and

summary of high wind speeds in Alberta, using calculated return periods of high wind speeds that represent the average length of time between gusts of given wind speeds. In addition, the directional history of maximum recorded gusts was examined.
