Wind Energy and Landscape C.F. Ratto,G. Solari,1998-01-01 Arising from an international workshop, these papers discuss aspects of wind turbines and the landscape. Topics: Harmonization of wind turbines with landscape; Visual and audio impact of wind turbines; Interference with telecommunication; Impact of wind turbines on birds; Real experiences in different countries; Offshore wind farms; Wind turbines in coastal and mountainous areas; Wind turbines, thunderstorms and lightning; Economic and social impact of wind turbines; Insurance policies regarding wind turbines; Greater public acceptance of wind turbines.

Use of Climatology to Predict Maximum Wintertime Wind Speeds at the Kennedy Space Center and Cape Canaveral Air Station Lisa K. Coleman,2000-03-01 This thesis uses statistical analysis to forecast the probability of meeting or exceeding the maximum allowable wind speeds for each of the launch pads at the Kennedy Space Center (KSC) and Cape Canaveral Air Station (CCAS). Wind data were collected from the Weather Information Network Display System (WINDS), a collection of 47 meteorological towers located throughout KSC and CCAS, over a period of five winters. A Fortran program was written to calculate conditional probabilities of meeting or exceeding a given threshold speed during eight consecutive one-hour periods, using the current wind direction and peak wind speed as inputs. Forecast probabilities were displayed in a table according to time period and wind direction. Accuracy was measured by constructing contingency tables and calculating various measures of accuracy. Results were tested for significance by calculating p-values for the chi-square test. This method was found to have very little skill in forecasting maximum wind speeds. It is not recommended for operational use.

Application of the Wind Gust Estimate and Comparison to the AFWA MM5 Wind Gust Algorithm Kevin W. LaCroix,2002-03 The Air Force Weather Agency (AFWA) runs the Penn State/NCAR mesoscale Model 5 (MM5) as their main mesoscale weather forecast model. One of the post-processing procedures is a diagnostic algorithm, which is used to help identify convective and non-convective wind gusts. O. Brassuer has identified a new Wind Gust Estimate (WGE), as a physically based method of computing non-convective wind gusts. The WGE surmises that Turbulent Kinetic Energy (TKE) transfers the momentum of faster upper-air winds to the surface, overcoming the buoyant energy of the surface layer. This work converts Brassuer's WGE to FORTRAN code and utilizing post-processed CONUS AFWA MM5 model output to estimate wind gusts by the WGE method. The WGE and AFWA methods are then categorically compared for accuracy and skill in forecasting wind gusts, to determine if the WGE method is superior to the current method. Three geographical regions are identified to determine gust sensitivities of the WGE and AFWA algorithms. The WGE generally performs better than the AFWA algorithm during daylight hours in correctly identifying and predicting gusts. Operational use of the WGE is warranted in the day and coastal regions, while improvements to the algorithm's handling of nighttime wind gusts is needed.

Extreme Value Analysis of Wind Gusts in Alberta Thomas K. Flesch,John D. Wilson (Geographer),Canada. Forestry Canada,Alberta Land and Forest Services,Canada-Alberta Partnership Agreement in Forestry,1993 A recent demonstration indicated the benefits and practical applications of a silviculture and harvesting system that protects understory white spruce while harvesting overstory aspen. One of the risks associated with this system is the instability and vulnerability of released white spruce to wind damage. To reduce the risks of wind damage in the current and new silvicultural systems applied to the Boreal forest, wind risk assessment and classification systems must be developed. This report presents an analysis and summary of high wind speeds in Alberta, using calculated return periods of high wind speeds that represent the average length of time between gusts of given wind speeds. In addition, the directional history of maximum recorded gusts was examined.

Wind Energy Conversion 1991 British Wind Energy Association. Conference,1991-09-02 Having sited the conference where, even in July, they had a good chance of being able to test theories on a moment's notice, contributors from a wide range of disciplines consider not only the economic and engineering parameters of wind energy, but also the contentious issues of noise, visual impact, and aesthetics that have often accompanied the implementation or attempted implementation of wind farms in economically and politically marginalized regions of Britain. One of the three keynote addresses holds an olive branch to environmentalists. The other 45 papers cover overviews and perspectives, windfarm design and construction, power quality, wind turbine philosophies, autonomous systems, standards, design methods, technical tools, components, planning, visual and aesthetic considerations, noise issues, non-UK markets financing and economics, market and industrial opportunities in the UK, and integrating wind energy into the grid. Local Wind Assessment in Australia T. Yang,Robert P. Cechet,K. Nadimpalli,2014 Wind multipliers are factors that transform regional wind speeds to local wind speeds considering local effects of direction, terrain, shielding and topographic influences. In order to assess the local wind hazard (spatial significance in the order 10's of metres), wind multipliers need to be computed, so that the regional wind speeds (order 10 to 100's of kilometres) can be factored to provide local wind speeds. These local wind speeds are critical to the wind-related activities including hazard and risk assessment. Activities also include agricultural growth and moisture demand applications along with energy-related applications such as wind farm developments. This document describes background information relating to wind multipliers and focuses on the development of a wind multiplier computation methodology. The Appendix provides an examples of the wind multiplier computation methodology to wind hazard and wind risk assessment. -- Online abstract.
